

Mast cells and Basophils play the Game of Allergy!
International Mast Cell and Basophil Meeting:

MCBM 2010

9 and 10 December 2010 in Berlin

www.mcbm2010.net

Mast cells and basophils are generally seen as important effectors of allergic responses that produce and release more mediators than any other cell type. Recent evidence indicates that these cells can interact with virtually all other cell types and that they have many other functions directly interacting with other inflammatory cells.

If you would like to discuss and find out more about mast cells and basophils:

Please come and join us at the

MCBM 2010

This meeting is co-hosted by

EMBRN (European Mast Cell and Basophil Research Network)

AGMZB (Arbeitsgemeinschaft Mastzellen und Basophile) of the ADF (Arbeitsgemeinschaft Dermatologische Forschung) and of the DGAKI (Deutsche Gesellschaft für Allergologie und Klinische Immunologie)

DFG SPP1394 (Priority programme of the DFG - Deutsche Forschungsgemeinschaft)
